Subject Index

Adaptive response of cellular antioxidant systems, 292
Adhesion, leukocyte, stimulation of, 114
Age, atherosclerotic lesion formation correlated to, 102
Alcohol, diet and, 324
Aldehydes, deleterious biologic effects of, 79
Antiatherogenic activities, 102
Antioncogene, 270
Antioxidant levels, 58
Antioxidant nutrients, intakes of, 122
Antioxidant vitamins in current, ex-, and never smokers, 349
Antioxidants
  coronary heart disease and, 356
  inhibition of lung cancer by, 186
  protective effect of, 44
Apoprotein B-100, 92
Aqueous solution, radical generation from cigarette smoke in, 40, 45
Ascorbate, 19
Ascorbic acid
  estimating cigarette smokers' requirements of, 335
  mutagen and carcinogen effect modulated by, 229–238
Ascorbic acid oxidation, 78
Atheroma, 68
  thrombus differentiated from, 111
Atherosclerosis
  endothelial integrity in, 99
  lipid peroxidation and, 111

Benzopyrene, interactions between vitamin A and, 203
Blood cholesterol, 125
Body mass index, 125
Breast cancer, vitamin E and, 287
Bronchial carcinoma, expression of p53 by, 243

C-fos, 273
c-myb, 273
Cabbage, 71
Caerphilly Heart Disease Study, 337
Canadian cigarettes, 179
Cancer chemoprevention, 182
Canthaxanthin, 162, 168, 263
Carcinogenesis
  carotenoids acting in postinitiation phase of, 163
  tobacco, potential inhibitors of, 140
  vitamin A depletion and, 203
Carotene
  dietary intake of, by smoking group, 353
  predictors of serum levels of, 325
β-Carotene, 23, 55, 164
  mutagen and carcinogen effect modulated by, 229–238
  prooxidant, formation of, 266
  vitamin A depletion and, 203
Carotenoids
  inhibition of neoplastic transformation by, 163
  mutagen and carcinogen effect modulated by, 229–238
Catalase, 18
  activities of, in smokers, 293
  effect of, on cigarette smoke extract modified low density lipoprotein, 92
Catechol, 16, 21–22
Causative agents, likely, for tobacco-related cancers, 148
Cell injury, endothelial, 99
Chain smokers, 71
Changing cigarette, 141
Chemiluminescence, 57
Chemoprevention, 145
Chemopreventive agents, 10
Cigarette consumption, 2
Cigarette smoke
  actions of, on leukocytes and endothelium, 113
  membrane damage from, 29
  oxidants in, 12
  radical generation from, 40, 45
  vitamin A depletion and, 203
Cigarette smokers
  daily food group intake of, 316
  daily nutrient intake of, 315
  dietary patterns of, 310
  estimating ascorbic acid requirements for, 335
  social and physical characteristics of, 351
Cigarette smoking
  coronary heart disease and, 130
  diet and, 323, 347
  expression of p53 and, 243
  oxidative damage in the lung and, 289
Cigarettes, Canadian, 179
Cohort Study, 281
Conditional logistic model, 281
Conjugated dienes, plasma concentrations of, 123
Connexin 43, 162
Connexin 43 gene expression, measurements of, 167

Coronary heart disease, 68
  antioxidants and, 356
  cigarette smoking and, 130
  cigarette smoke a risk factor for, 111
  French paradox for, 299
Cox's proportional hazards model, 281
Cruciferous vegetables, uptake of phenethyl isothiocyanate through, 190
Cytokines, endothelial cell integrity compromised by, 103–104

Decapeptide, 19
Diet
  1987 National Health Interview Survey and, 310
  interactions of smoking and, 347
Dietary antioxidant intakes, 120
Dietary fat, 154
Dietary fats, composition of, 305
Dihydrolipoic acid, 78
Dihydroxybenzenes, inactivation of tumor suppressor genes and, 256
Disease risk factors, 6
DNA
  binding of tar species to, 24
  damage to, caused by cigarette tar, 20
DNA single-strand breaks, 250

Ellagic acid, inhibition of nitrosamine-induced lung tumors by, 181
Ellagitannins, 182
Emphysema, 55
Endogenous nitrosation, 213
Endonucleases, 251
Endothelial barrier function, 100
Endothelial cell injury, 99
Environmental tobacco smoke, 20
Enzymes, zinc-dependent, 103
Epigallocatechin gallate, 195, 202
Erythrocytes, oxidative hemolysis of, 31
Excigarette smokers, 130

Fatty acids, endothelial cells injured by, 101
Ferritin, 17
Finnish men, vitamin E and lung cancer study of, 280–285
Fish oil concentrates, 67
Fish oil feeding, 119
Fluorescence analysis of DNA unwinding assay, 21
Foam cells, macrophages transformed into, 93
Food frequency questionnaire, 131, 311
Food groups, 134
  median weekly intake, by tobacco use status, 314
Former tobacco users
  daily food group intake of, 318
  daily nutrient intake of, 317
Free radicals
  membrane damage from, 29
  reaction of biological membranes to, 7
French parodox for coronary heart disease, 299

Gap junctions, structure and function of, 162
Gas-phase cigarette smoke, radicals in, 14
Genetics, cancer and, 9
Glutathione, 78
  regeneration of vitamin E by, 293
Green tea, 71, 150
  epigallocatechin gallate and, 195

Health paradoxes, 5
Health risks, 4
Heat shock proteins 70 and 90 kD, 269–270
Hemolysis, oxidative, of erythrocytes, 31
Hydrogen peroxide, 251
Hydroquinone, 251
8-Hydroxydeoxyguanosine, 250
Hypovitaminosis ascorbic acid, prevalence of and prediction of, 339

Immunochemistry, low levels of p53 undetectable by, 243
Indole-3-carbinol, modulation of nitrosamine tumorigenesis by, 190
Intercellular communication, upregulation of, 162
Intragastric nitrosation, 213
Iron chelator, 47
Isothiocyanates, protective effect of, 187

Jurkat T (human lymphoma) cells, 42

Leukocyte/endothelium interaction, 112
Linoleic acid, intake of, by smoking category, 133
Lipid oxidation, effect of aldehyde on, 76
Lipid peroxidation, 165
  atherosclerosis and, 111
  cigarette smoke-induced, 31
  relation of, to coronary heart disease risk factors, 120
Lipoproteins, appropriate *in vivo* model of, 110
Low density lipoprotein
  cigarette-smoke extract modified, 92

increased levels of platelet-activating factor in, 105
Lung adenoma assay, 178
Lung cancer
risk of, vitamin E and, 280–285
smoking and dietary habits in relation to, 302
Lutein, 168
Lycopene, 168

Macrophages
rat alveolar, 21
transformation of, into foam cells, 93
Mechanism, protective, of vegetable consumption, 187
Membrane order, measurement of, 43
Membrane oxidation, 9
Membranes, oxidation of lipids in, 30
Methionine, 19
Methionine sulfoxide, 19
3-Methylcholanthrene, 162
4-(Methylnitrosamino)-1-(3-pyridyl)-1-butanone, metabolism of, 151
4-(N-Methyl-N-nitrosamino)-1-(3-pyridyl)-1-butanone, 214
4-(N-Methyl-N-nitrosamino)-4-(3-pyridyl)-1-butanal, 214
Mixed-function oxidases, metabolism of vitamin A altered by, 204
MONICA, 348
Mutation, p53-encoding gene, 243

N-myc, 273
National Health and Nutrition Examination Survey, Second, 311, 336
Neoplastic transformation, inhibition of, by carotenoids, 163
Nested case-control study, 281
Neutrophils, activated, tar-pretreated lung cells exposed to, 253
Nicotine, mechanism of conversion to 4-(N-methyl-N-nitrosamino)-4-(3-pyridyl)-1-butanone, 224
Nicotine nitrosation, 213
mechanism of, 217
rate law of, 217
Nitric oxide, 15
Nitrogen dioxide, 15
N-Nitrosamines, production of, during tobacco curing, 177
Nitrosonornicotine, 214
Nonsmokers, dietary patterns of, 310
Nuclear magnetic resonance, 44
Nutrient intake, 130
median daily, by tobacco use status, 313

Odds ratios, hypovitaminosis ascorbic acid risk, 336–337
Oxidative damage
carotenoid inhibition of, 164
cigarette smoke-induced, 31
cigarette smoking and, 290–291
Oxidative DNA damage, nitrosamine carcinogenesis and, 196
Oxidative stress
cigarette smoking and, 289
endothelial cells subjected to, 100
Oxygen consumption, measurement of, 42

P53
expression of protein encoded by, 243
role of, in tumor cell inhibition, 272
Pancreas tumors, 156
Peroxynitrate, 19
Phagocytes, 53
Phenylalkylisothiocyanates, chemopreventive potential of, 150
Plasma antioxidant concentrations, effect of aldehyde on, 76
Platelet aggregability, increase of, by smoking, 303
Polycyclic aromatic hydrocarbons, vitamin A protection and, 204
Polymorphonuclear leukocytes
effect of cigarette smoke on, 41, 46
overproduction of oxidants by, 232
Polyphenolic compounds, pulmonary carcinogenesis prevention by, 177
Polyunsaturated fat, coronary heart disease and, 130
Protection, 101
phenethyl isothiocyanate, 187
Protein modification, effect of aldehyde on, 76
α-1-Proteinase inhibitor, human, inactivation of, 18
Protooncogene, 274
Pseudooxynicotine, 214
ring-chain tautomerism of, 221
Pseudooxynicotine nitrosation, rate law of, 224
Pulmonary tissue, peroxidative damage in, 292

Questionnaire, reliance only on, 288
Quinone radical system, 13

Radical generation from cigarette smoke in aqueous solution, 40, 45
Reactive oxidants, 54

Reactive oxygen metabolites, cigarette smoke and, 249
Recommended daily allowance, ascorbic acid, 340
Respiratory tract lining fluids, effects of *in vivo* cigarette smoke exposure on, 73
Retinoids, 164
Retinol, dietary intake of, by smoking group, 353
Retinyl palmitate, 274

Scottish Heart Health Study, 348
Scottish MONICA Antioxidant Vitamin Study, 348
Selenium, breast cancer and, 287
Semiquinone/hydroquinone equilibrium, 13
Serum carotene, dietary values of, 355
Serum retinol, dietary values of, 355
Serum vitamin C, dietary values of, 354
Serum vitamin E, dietary values of, 354
Sister chromatid exchanges, decrease in, with β-carotene, 232
Smokers (*see* Cigarette smokers)
Smoking status, misclassification of, 288
Smooth muscle cells, 66
Spin adduct, 17, 41
Spin-lattice relaxation time, 44
Splenocytes, rat, 21
SUPERCARP program, 336
Superoxide, 18–19
Superoxide dismutase, 119
  activities of, in smokers, 293
  effect of, on cigarette smoke extract modified low density lipoprotein, 92
  protective effect of, 44
Supplementation, vitamin, 341
Systolic blood pressure, 125

T lymphocytes, effect of cigarette smoke on physical properties of, 42, 47
Tar, DNA damage promoted by, 253
Tar values, 180
Thiobarbituric acid-reactive substances, 66, 92, 123, 165
Thymocytes, rat, 21
Tissue stores of vitamin A, 288
Tobacco smoking history, 1–2
Tobacco-specific N-nitrosamines, 140
Tocopherol, predictors of serum levels of, 330
α-Tocopherol, 46
  mutagen and carcinogen effect modulated by, 229–238
  tissue protective properties of, 101
Transcription factors, 273, 275
Trypan-Blue, 42
Tumor cells
  carotenoids inhibit growth of, 234
  cytotoxic effects of peripheral blood mononuclear cells on, 233
Tumor necrosis factor, endothelial cell integrity and, 103–104
Tumorigenic agents, 146

Uric acid levels, 65
Urinary marker, phenethyl isothiocyanate as, 190
Urinary cotinine concentrations, 288
US recommended daily allowance, 126

β-Very low density lipoprotein, 66
Vitamin A depletion, β-carotene and, 203
Vitamin C, 23, 55, 67
  dietary sources of, 350
  intake of
    by smokers, 293
    by smoking group, 352
  plasma concentrations of, and incidence of coronary heart disease, 120
Vitamin E, 23, 55, 67
  inhibition of leukocyte adhesion by, 118
  intake of, by smoking group, 352
  lung cancer risk among nonsmokers and, 285
  plasma concentrations of, and incidence of coronary heart disease, 120
  "protection and sparing of," by vitamin C, 70
  smoking-related disorders mediated by, 292
  tissue protective properties of, 101
Vitamin E status, estimation of, 284
Vitamin E supplementation, 124

Watercress, source of dietary phenethyl isothiocyanate in, 190
White cells, 118
Wine consumption, French paradox partly explained by, 307

X-irradiation, neoplastic transformation induced by, 163

Young people, 71

Zinc, endothelial cell integrity and, 102
